Thermoplastic Road Marking Material

CU Thermoplastic Road marking is environmentally friendly consisting of 100% solids and containing no solvent. The material consists of a combination of light plasticized resin, aggregate pigment and extender, heated to around 200° - 240° C (if sprayed) which rapidly cools to road temperature. It is formulated to be applied by all leading makes of road marking machinery. Application can be in one of three ways: SCREED, SPRAY, or EXTRUSION Formulation and application equipment varies with each method.
